Summary :

Microsoft certified data analyst having 5 years of experience, specializing in turning raw business data into actionable insights that drive cost optimization, process improvement and operational performance. Strong exposure in analyzing business data using SQL, Power BI, Excel and Python to develop analytical solutions, identify performance gaps, uncover opportunities and support data-driven decisions. Transforming multi-source datasets into scalable reporting solutions that improve visibility, reduce manual reporting effort and enable faster decision-making, communicating analytical findings to senior stakeholders and management.

SKILLS & TOOLS

Analytics & Visualization: Power BI (Power Query, DAX, RLS), Fabric, Advanced Excel

Data & Querying: SQL (Advanced), Python (Pandas, NumPy), Snowflake

Cloud & Domain Platform: Microsoft Azure (Power BI Service), IQVIA

Process & Automation: ETL, MIS, Power Automate, Project Management, AI-Workflow Integration

PROFESSIONAL EXPERIENCE

Rubicon Research Ltd.

Mar 2024 – Present

Executive Data Analyst

- Engineered end-to-end data cleansing, validation and analysis for raw business data across 50+ product SKU's, reducing data errors by ~40% and improving reporting accuracy to 90%.
- Designed and deployed 15+ Power BI reporting solutions with advanced DAX measures, star-schema data models and ETL transformations used directly in quarterly business reviews and leadership strategy workshops.
- Conducted US market research and competitive analysis by benchmarking competitor pricing, revenue offerings, market trends and cost structures, identifying 30% pricing gaps and cost-optimization opportunities that supported pricing strategy, sourcing decisions and commercial planning.
- Performed exploratory, root-cause, and statistical analysis on large, complex datasets using SQL, Python and Excel including trend and correlation analysis to uncover performance gaps and drive process improvement.
- Automated recurring pricing, revenue, and product-performance reporting using Python and Power BI, reducing manual reporting effort by 30% and accelerating data-driven decision-making.
- Translated business requirements from 4 cross-functional teams — Business Development, Finance, Project Management, and Operations — into 10+ analytical reporting solutions adopted org-wide.
- Conducted revenue trend analysis, KPI tracking and performance benchmarking across multi-source datasets using SQL and Excel, identifying optimization opportunities to support strategic planning.
- Presented data-driven insights to senior leadership in quarterly reviews, directly informing cost-reduction and operational-efficiency decisions.

Knest Manufacturers Pvt. Ltd.

Dec 2021 – Feb 2024

Design Engineer – Data Reporting

- Extracted, transformed and validated data from multiple source systems, improving data quality, consistency and reliability across BI workflows that results reducing report development time by 25%.
- Developed VBA macros to automate repetitive data processing tasks, improving reporting workflow efficiency and reducing manual effort by 15hrs per week.
- Built interactive Power BI dashboards with drill-throughs, dynamic filters, and bookmarks to track revenue, gross margin, pricing, and territory-performance KPIs, driving adoption among BDMs and senior stakeholders.

- Prepared and maintained daily, weekly and monthly MIS reports for sales, costing and operations teams, to make sure numbers were accurate and delivered on time every cycle.
- Built dynamic MIS trackers in Excel using If functions, Lookup and Pivot Tables to consolidate data from 6+ source sheets, cutting monthly report preparation time by 20%.
- Collaborated with cross-functional teams from requirement gathering through implementation, cutting review-to-deployment turnaround by 25%.

PROJECTS

E-Commerce Sales Performance Analysis | Python, SQL, Power BI, Excel | [Link](#)

- Built automated Python data pipelines to clean and analyse 10K+ e-commerce transactions.
- Identified revenue gaps worth \$1mn and flagged 3 high-growth product categories for expansion.
- Developed Power BI dashboard for self-service business reporting.
- Delivered actionable recommendations for pricing optimization and revenue growth.

Products KPI Exploratory Data Analysis | Python (Pandas, Matplotlib, Seaborn), Excel | [Link](#)

- Performed EDA on sales data to uncover product performance trends, customer behaviour patterns.
- Identified a high-value customer pool driving 45% of total revenue, directly supporting a targeted retention campaign strategy.
- Visualized geographical sales distribution using Matplotlib heatmaps, pinpointing 3 underserved regions with 25%+ untapped demand potential.

EDUCATION

Dr. D. Y. Patil Institute of Engineering & Management, Pune
Bachelors of Engineering (BE) - Civil Engineering (GPA 7.2/10)
Relevant Coursework: Mathematics & Statistics, Linear Algebra, Calculus, Project Management

2021

CERTIFICATIONS

[Microsoft Power BI Data Analyst Associate \(PL-300\)](#)
Data Analytics & Visualization — Accenture Forage
Business Analysis & Process Management — Coursera
Advanced SQL Certification — HackerRank

2026
2025
2024
2023

AWARDS & RECOGNITION

- Spot Awarded by senior management for leading a data-driven SKU rationalization initiative that reduced operational costs by 25%.
